

DanCables is introducing STACKBOX - our completely new concept within power distribution boxes. Made of impact-resistant plastic with rubber properties, makes STACKBOX extremely compact. STACKBOX is available in several sizes, with different accessories, and can be combined and stacked according to requirements. You can customize your power distribution solution just as you want by combining the different STACKBOX components. Furthermore, if a location requires a fewer connection points or a lower amperage, you can disconnect the STACKBOX components and use them separately. On the other hand, if you want to use more power, you easily connect several STACKBOX components by using an extension cable. This provides a highly flexible solution. The various components of the STACKBOX can be locked mechanically by means of the fixed hinges, which also can be provided with locking pins or padlock. The optional foot makes the STACKBOX easy to use. With it, the box is also suitable for outdoor use (complies with European standards) on e.g. construction sites and demolition sites. It is also possible to anchor the foot, so that the STACKBOX is very suitable for, among other things, connection stations with a fixed connection such as e.g. port gates, scaffolding and on floors, where it is at risk of overturning. Combine the STACKBOX with our flexible aluminum ALUKAFLEX® cables and you have a serious flexible solution for places where temporary power is needed, such as festivals, events, construction, industry & defense tasks.

YOUR BENEFITS

- ✓ Extremely compact and stackable power distribution box
- ✓ Made of impact resistant plastic with rubber properties
- ✓ Produced in accordance with EN61439-4: 2013 standards
- ✓ Can be fitted with a padlock
- ✓ Mix & match - tailor a solution that suits you
- ✓ Has recessed in- and output connectors that reduce damage during use and transport
- ✓ The stand/foot (optional) provides extra flexibility and stability
- ✓ Available in two sizes that can be combined according to your design
- ✓ Available in 2 colors - white and black
- ✓ Can be supplied with wheels
